State of Florida

Strategic IT Landscape and Market Analysis Report

SLG Strategy Team

March 20, 2026

1. Executive Summary & Macro Landscape

The State of Florida represents one of the most dynamic, high-growth, and politically complex State and Local Government (SLG) technology markets in the United States. Fueled by a robust global presence in tourism, trade, and real estate development, Florida's economy has swelled to a staggering $1.76 trillion Gross Domestic Product (GDP), firmly establishing it as the 15th largest global economy.[1] The state's population has eclipsed 23.3 million, experiencing a growth rate that significantly outpaces the national average.[3] However, the macroeconomic environment is currently undergoing a pivotal transition. After experiencing historic budget highs supported by COVID-era federal funding and unprecedented economic expansion—where GDP growth peaked at a robust 8.3 percent in Fiscal Year (FY) 2021-2022—state economists are now forecasting a normalization of growth rates and a necessary tightening of fiscal policy.[4]

The enacted FY 2025-2026 General Appropriations Act (GAA) stands at $114.77 billion after accounting for $1.35 billion in gubernatorial vetoes, representing a 1.5 percent reduction from the previous fiscal year and signaling a distinct shift toward fiscal austerity.[6] Looking ahead to the upcoming FY 2026-2027, the fiscal landscape is defined by competing visions of governance. Governor Ron DeSantis has proposed a $117.4 billion "Floridians First" budget, which relies on $16.75 billion in reserves to fund tax relief, infrastructure, and aggressive debt reduction.[7] Conversely, legislative leaders in the Florida House and Senate are advancing leaner, austerity-focused proposals closer to $113.58 billion and $115.03 billion, respectively.[4]

Critical Pipeline Risk: A major dynamic for technology vendors is that the 2026 legislative session ended on March 13, 2026, without lawmakers fulfilling their constitutional requirement to pass a finalized budget. Lawmakers are scheduled to return to Tallahassee for a budget-focused special session in mid-April. Consequently, any near-term CapEx procurements tied to upcoming state funding face a high risk of stalling until this special session concludes.

Politically, the executive branch maintains a conservative mandate focused on broad-based tax relief, aggressive debt reduction, and the restriction of federal overreach.[10] This ideological stance has profound implications for enterprise technology procurement. State leadership actively resists regulations perceived to stifle innovation, taking steps to preempt local and state-by-state Artificial Intelligence (AI) regulations to align with federal deregulation mandates, while concurrently advancing a localized "AI Bill of Rights" designed to protect consumer privacy, restrict foreign-developed AI tools, and heavily regulate hyperscale data center infrastructure.[12]

To successfully penetrate the Florida SLG market, enterprise technology providers must align infrastructure, cloud, and advisory solutions directly with the state's overarching priorities. The core administrative goals driving technology investments are:

- **Economic Development and Infrastructure Optimization:** The state is scaling

transportation, supply chain, and aerospace infrastructure to support its booming population. This includes a massive $13.7 billion investment in the Florida Department of Transportation's (FDOT) five-year work program and strategic funding for Space Florida's Spaceport Improvement Program (SIP).[14] These initiatives require advanced data analytics, geographic information systems (GIS), edge computing, and robust digital twins to manage complex civil engineering projects.[16]

- **Public Safety and Whole-of-State Cyber Resilience:** Florida is actively fortifying state and local government networks against ransomware and state-sponsored threat actors. This is driven by the expansion of the State Cybersecurity Operations Center (CSOC) and the aggressive deployment of the Local Government Cybersecurity Grant Program (FLGCGP), which procures endpoint and network discovery tools directly on behalf of fiscally constrained municipalities.[18]
- **Health and Human Services (HHS) Modernization:** The state is redesigning its Medicaid delivery system, expanding behavioral health services, and overhauling the Comprehensive Child Welfare Information System (CCWIS).[21] These multi-year initiatives demand massive, interoperable data integration platforms, master data management (MDM) architecture, and highly secure, HIPAA-compliant hybrid-cloud environments.[23]
- **Digital Equity and Workforce Development:** Florida is focused on expanding broadband access to rural counties via federal programs like the $1.16 billion Broadband Equity, Access, and Deployment (BEAD) allocation.[24] Simultaneously, the state is aggressively funding Career and Technical Education (CTE) programs, allocating over $467 million to build a future-ready, AI-literate workforce capable of sustaining the state's technological growth.[25]

2. Power Structure & Key Stakeholders

Florida's technology governance is heavily influenced by a continuous, structural tug-of-war between the Executive Branch (the Governor and the Cabinet) and the Legislature (the House and Senate). Understanding the clear distinction between financial purchasers—those who control the appropriations process and statutory authority—and technical influencers—those who dictate architecture, write specifications, and lead vendor selection—is critical for strategic account planning and complex enterprise sales motions.

Name & Title	Sphere of Influence	Recent Public Stances on Technology
Ron DeSantis Governor	Financial Purchaser / Policy Executive	Advocates for fiscal austerity, the aggressive modernization of legacy mainframe systems, and strict data privacy regulations. Champions the "AI Bill of Rights" to protect citizens from deepfakes and pushes back

Name & Title	Sphere of Influence	Recent Public Stances on Technology
		against hyperscale data center subsidies that threaten residential energy rates.[13]
Blaise Ingoglia Chief Financial Officer (CFO)	Financial Purchaser	Appointed in mid-2025 following the resignation of Jimmy Patronis. Oversees the Department of Financial Services (DFS) and serves as the ultimate executive sponsor for the state's massive, delayed enterprise resource planning modernization project (Florida PALM).[26]
Daniel Perez Speaker of the House	Financial Purchaser / Legislative	Driving a leaner legislative committee structure, establishing the Information Technology Budget & Policy Subcommittee to heighten scrutiny on failing IT projects. A major proponent of healthcare technology reform, transparency, and operational cost containment.[8]
Gayle Harrell State Senator	Legislative IT Influencer	Prime sponsor of sweeping IT reorganization bills (such as SB 480) aimed at dissolving the current Florida Digital Service to create a more powerful, accountable, and centralized enterprise technology agency.[30]
Fiona McFarland Chair, IT Budget & Policy Subcommittee	Financial Purchaser / Legislative	Leads the House committee responsible for scrutinizing agency IT budgets. Demands strict accountability, exhaustive technical debt assessments, and rigid return-on-investment (ROI) metrics for any new modernization funding requests.[32]
Warren Sponholtz State Chief Information Officer (CIO)	Technical Influencer / Purchaser	Recently elevated from Deputy CISO to State CIO within the Florida Digital Service. Focuses on fostering interagency partnerships, modernizing infrastructure, enhancing data interoperability, and navigating the agency through looming legislative restructuring threats.[33]

Name & Title	Sphere of Influence	Recent Public Stances on Technology
Glendora Fortune CIO, Dept. of Transportation (FDOT)	Technical Influencer	Drives the technological backbone of Florida's infrastructure boom. A strong proponent of cloud infrastructure strategies, enterprise data analytics, autonomous/connected vehicle technologies, and geographic information systems (GIS).[34]
Cole Sousa CIO, Dept. of Children and Families (DCF)	Technical Influencer	Oversees a massive IT budget exceeding $141 million. Highly focused on the Comprehensive Child Welfare Information System (CCWIS) modernization, agile service delivery models, and enterprise wireless access point deployments.[36]
Jonathan Fozard CIO, Florida State University (FSU)	Technical Influencer	Highly influential in the Higher Education sector. An award-winning leader focused on establishing AI partnerships (e.g., with Microsoft), leveraging machine learning for student retention, and supporting advanced research computing at facilities like the National High Magnetic Field Laboratory.[38]

(Note: The State CISO position has experienced significant turnover in recent years. Most recently, former CISO Jeremy Rodgers stepped down for a role in the private sector, leaving a critical leadership vacuum right as the state attempts to distribute its massive Local Government Cybersecurity Grant Program.[85] Furthermore, former Department of Management Services (DMS) Secretary Pedro Allende departed in late 2025, leaving DMS under the interim leadership of Tom Berger as of January 2026. Berger is notably overseeing massive, in-flight procurements like the estimated $420 million MyFloridaNet-3 contract during a period of intense legislative scrutiny.[74])

3. IT Governance & Service Delivery Model

Operating Model: A Federated System Facing Legislative Disruption

Historically, Florida's IT governance has operated under a heavily entrenched **federated model**, wherein individual state agencies—such as the Department of Transportation, the Department of Children and Families, and the Agency for Health Care Administration—maintain massive, autonomous IT budgets and execute their own distinct procurement strategies.[40]

Currently, the **Florida Digital Service (FLDS)**, housed within the Department of Management Services (DMS), acts as the central IT authority. Established in 2020, FLDS is statutorily mandated to propose innovative technology solutions, manage the State Cybersecurity Operations Center (CSOC), develop comprehensive enterprise architecture, and provide rigorous project management oversight for any state agency IT project exceeding $10 million.[18] However, in practice, FLDS functions more as a hybrid oversight and policy body than a fully consolidated, centralized service provider.

Recognizing these persistent structural inefficiencies, a mounting backlog of "technical debt," and a string of high-profile IT project delays, the Florida Legislature is actively attempting to reshape the delivery model once again. While a previous attempt to overhaul the system via Senate Bill 7026 (ASSET) died during the 2025 legislative session, a new, active threat emerged in the 2026 session. Senate Bill 480 advanced to propose a "type two transfer" that would completely dissolve the Florida Digital Service.[86] In its place, the bill seeks to create the Division of Integrated Government Innovation and Technology (DIGIT) as a separate budget entity located directly under the Executive Office of the Governor, with the director serving as the state CIO.[86] This signals a clear legislative demand to shift central IT authority away from DMS and directly to the Governor's office, enforcing strict architectural standardization and centralized procurement oversight.

Friction Points: The Chargeback Model and Legacy Operations

State agencies procure centralized infrastructure hosting, mainframe operations, and managed IT services primarily through the state data centers, most notably the Northwest Regional Data Center (NWRDC). This infrastructure operates on a strict **cost-recovery chargeback model**, which has historically served as a significant operational friction point between central IT authorities and customer agencies.[42]

The core issue stems from the fact that chargeback mechanisms in Florida are tightly regulated by statute. The cost-recovery mechanisms must ensure that no single service or customer entity subsidizes another; agencies must be billed for the full direct and indirect costs of their specific consumption.[42] To protect agencies from exorbitant administrative overhead, the Legislature has historically intervened, capping auxiliary assessments charged to state agencies for contract management services provided to NWRDC at a maximum of 3 percent.[43]

This rigid financial structure creates friction in three distinct ways:

1. **Opacity and Billing Disputes:** Agencies frequently contest the highly granular billing metrics (e.g., CPU hours, storage tiers, port usage) provided by the data centers. Without modern FinOps dashboards, this leads to manual, disjointed reconciliation processes that erode trust and delay IT modernization initiatives.[44]
2. **The "Shadow IT" Flight to Public Cloud:** To circumvent complex chargeback models and the perceived sluggishness of centralized legacy infrastructure procurement, autonomous agencies increasingly procure their own decentralized public cloud services (e.g., AWS, Azure) directly from software value-added resellers.[46]
3. **Technical Debt Accumulation and Stranded Costs:** As agile agencies migrate their modern workloads to the cloud, Central IT is left carrying the technical debt of aging, on-premises infrastructure. This results in stranded costs and underutilized data center floorspace that the strict chargeback model cannot easily absorb without raising rates on the remaining legacy tenants, creating a vicious cycle of deferred maintenance.[46]

4. Financials & Budget Breakdown

Total & IT Budget

The State of Florida's fiscal posture is currently navigating a delicate transition from the post-pandemic era of massive federal stimulus surpluses to a period of projected fiscal constraints.

- **Operating Budget Overview:** The enacted FY 2025-2026 General Appropriations Act (GAA) totals $114.77 billion.[6] Moving into the FY 2026-2027 cycle, the Executive Office of the Governor has proposed a $117.4 billion budget, representing a 2.2 percent increase aimed at debt reduction and infrastructure scaling.[48] Conversely, the Florida House of Representatives ($113.58 billion) and the Florida Senate ($115.03 billion) are proposing leaner budgets that cut current spending levels to avert looming deficits.[4] Crucially, the 2026 legislative session adjourned on March 13 without a finalized budget agreement. Lawmakers will convene for a special session in mid-April to reconcile these differences and finalize the budget.
- **IT Budget Split (O&M vs. Capital):** *Data Unavailable*. The State of Florida does not publish a single, consolidated line item that distinctly segregates recurring operational spend (O&M) from net-new capital investments across the entire enterprise. The highly federated nature of the state means that IT expenditures are embedded within the operational budgets of dozens of individual departments.
- **Extrapolated IT Spend:** However, specific agency IT appropriations reveal heavy capitalization in modernization. For instance, in recent budget proposals, the Department of Children and Families requested $141.2 million for IT, of which roughly $123.7 million is tied to ongoing IT operations and maintenance, leaving discrete capital directed at enterprise wireless access point replacements and software modernization.[37] The Department of Agriculture and Consumer Services requested $25 million, heavily indexed toward $3.6 million in net-new security enhancements alongside $26.9 million in

estimated IT operations.[37] The Department of Highway Safety and Motor Vehicles commands a massive $600+ million trust fund budget, with tens of millions directed specifically at IT modernization phases.[49]

Grants & Funding

Florida is aggressively leveraging massive influxes of federal and state grant dollars to drive technology modernization at both the state and municipal levels:

- **State and Local Cybersecurity Grant Program (SLCGP):** Administered by the Florida Digital Service, the state has appropriated $15 million in the FY 2025-2026 budget to provide direct cybersecurity commodities and services to local governments.[19] Crucially, to maximize adoption among fiscally constrained rural counties, **no local match is required**.[19] Instead of disbursing cash, the state acts as the procurement engine, purchasing endpoint discovery, vulnerability management, and SIEM solutions directly from vendors on behalf of the municipalities.[19]
- **Broadband Equity, Access, and Deployment (BEAD):** Florida has been allocated a historic $1.16 billion to expand high-speed internet infrastructure.[24] While the physical layer deployment moves forward through the state's grant portal, the National Telecommunications and Information Administration (NTIA) recently paused the state's associated $110 million BEAD Workforce Program pending further federal review.[50]
- **Disaster Recovery (CDBG-DR):** Florida continually appropriates hundreds of millions in federal block grants for hurricane recovery and hardening. Recent budgets included $396 million in Community Development Block Grant Disaster Recovery funding, which often includes significant technology investments in resilient communications infrastructure, data backup, and mobile command centers.[51]

5. Strategic Initiatives & Projects (Focus on Top 3)

Florida's enterprise technology landscape is defined by its massive, multi-year legacy modernization efforts. The state has notoriously struggled with large-scale ERP and MMIS implementations, prompting the Legislature to mandate rigorous independent verification and validation (IV&V) for the following top-tier projects.

1. Florida Planning, Accounting, and Ledger Management (PALM)

- **The Executive Mandate:** The overarching mandate is to completely replace the 40-year-old Florida Accounting Information Resource (FLAIR) system—a legacy COBOL mainframe architecture—with a modern, cloud-enabled enterprise financial management solution. The goal is to standardize business processes across all 35 state agencies, reduce risk exposure, and improve the state's financial management capabilities.[28]
- **The High-Spend Agency Owner:** The Department of Financial Services (DFS), overseen by the state's Chief Financial Officer.[28]
- **The Underlying IT Requirement:** This is a colossal Enterprise Resource Planning (ERP)

transformation heavily reliant on Oracle infrastructure and software licensing.[56] The project requires massive data cleansing, complex API and flat-file interface development to ensure interoperability with dozens of disparate agency business systems, and highly scalable cloud-hosting environments.[57]

- **Project Status:** The project is experiencing severe friction and technical setbacks. Originally slated to go live in July 2026, DFS was forced to push the deployment to January 2027 due to delays in system testing and agency readiness, subsequently missing the critical "Stage Gate 3 – Ready to Begin UAT" milestone.[28] The state continues to pump heavy funding into the project, with recent fiscal years showing combined DFS and agency readiness budgets exceeding $59 million annually, augmented by millions in IV&V oversight.[59]

2. Florida Health Care Connections (FX)

- **The Executive Mandate:** Transition the state from a monolithic, inflexible Medicaid Management Information System (FMMIS) to a modular, interoperable, and data-driven Medicaid enterprise system.[23] The goal is to align with the Centers for Medicare & Medicaid Services (CMS) Medicaid Information Technology Architecture (MITA) to reduce administrative burdens, improve data quality, and enhance service delivery for the state's 4.2 million Medicaid enrollees.[21]
- **The High-Spend Agency Owner:** The Agency for Health Care Administration (AHCA).[21]
- **The Underlying IT Requirement:** The FX project requires advanced data integration capabilities, master data management (MDM), and massive secure storage architecture. As AHCA transitions toward a modular approach, they require robust hybrid-cloud compute resources, APIs for secure interagency data sharing (particularly with the Department of Children and Families' ACCESS and FSFN systems), and advanced predictive analytics for Medicaid fraud detection and utilization forecasting.[23]
- **Project Status:** FX is one of the highest-funded technology initiatives in the state, receiving $124 million in recent budget proposals for continued development and systems modernization, reflecting the critical nature of health data interoperability.[21]

3. Motorist Modernization Project (ORION)

- **The Executive Mandate:** A multi-year, phased re-engineering of the state's driver license and motor vehicle registration systems. The mandate is to shorten wait times, expand citizen self-service portals, enhance fraud prevention, and improve law enforcement data accessibility, all without expanding the state government headcount.[62]
- **The High-Spend Agency Owner:** The Department of Highway Safety and Motor Vehicles (FLHSMV).[62]
- **The Underlying IT Requirement:** The core of the current Phase II is the Online Registration and Identity Operating Network (ORION). This requires migrating away from legacy on-premises databases to a fully integrated, highly available cloud-based system.[63] It involves deploying edge computing capabilities for local tax collector offices,

integrating robust identity verification security, and supporting continuous batch back-office processing.[64]

- **Project Status:** The project is actively deploying Phase II releases statewide, heavily integrating with third-party systems like Grant Street Group's TaxSys.[63] While the project has encountered minor schedule slippages due to developer vacancies, it continues to roll out. Recent budgets allocated over $13.2 million specifically for Phase II, supplemented by millions in additional funds for hardware and credentialing equipment.[52]

6. Procurement, Vendor Landscape, & Compliance

Procurement Vehicles & Cooperative Agreements

Florida's decentralized agencies heavily leverage pre-competed cooperative purchasing agreements to bypass lengthy, litigious Request for Proposal (RFP) cycles. The Department of Management Services manages the Vendor Information Portal (VIP), through which state agencies and local municipalities utilize:

- **NASPO ValuePoint:** Florida holds multiple Alternate Contract Source (ACS) agreements through NASPO. This includes high-volume vehicles specifically for Computer Equipment, Peripherals, and Related Services (Contract No. 43210000-23-NASPO-ACS, heavily utilized by Dell Technologies and HP) and Software Value Added Resellers.[65]
- **OMNIA Partners:** Widely used across the SLG and Higher Education spaces for Technology Products, Solutions, and IT Staff Augmentation (Contract No. 43210000-23-OMNIA-ACS-TX).[67]
- **State Term Contracts (STC):** The state aggressively uses STCs to streamline the procurement of Information Technology Staff Augmentation and specific hardware categories.[69]

The Battlefield (Vendor Landscape)

The infrastructure vendor landscape in Florida is highly competitive, dominated by entrenched legacy systems that are currently undergoing painful modernization cycles.

- **Compute & Storage:** Dell Technologies, Hewlett Packard Enterprise (HPE), and Cisco maintain massive footprints across the state via NASPO and OMNIA contracts, providing everything from client endpoints to core routing.[67] The state is actively battling aging infrastructure within its consolidated data centers. Reports from the state legislature and NASCIO continually highlight the urgent need to reduce physical server footprints, replace aging Storage Area Networks (SANs), and transition away from legacy mainframes.[22]
- **Integration & Cloud:** Oracle holds massive perpetual licensing and cloud integration contracts specifically tied to the Florida PALM project.[56] Accenture and Grant Street Group are deeply entrenched in the FLHSMV ORION modernization efforts.[63] Furthermore, DMS is currently previewing the procurement for MyFloridaNet-3 (MFN-3),

an estimated $420 million core network services contract that will serve as the state's digital backbone for the next decade.[74]

Compliance & Regulatory Drivers

Technology purchases in Florida are heavily dictated by rigorous security, data sovereignty, and compliance frameworks:

- **GovRAMP (formerly StateRAMP):** As Florida agencies and municipalities shift to the cloud, GovRAMP has become the de facto standard for verifying cloud service providers (CSPs) against strict NIST 800-53 controls.[75] Any Everything-as-a-Service (XaaS) offering proposed to the state must successfully navigate this marketplace to be considered viable.
- **CJIS & HIPAA:** Given the massive technology spend in law enforcement (FDLE, FLHSMV) and healthcare (AHCA, DCF), compliance with Criminal Justice Information Services (CJIS) Policy 5.9.5 and updated HIPAA Security Rules is mandatory. GovRAMP recently introduced a CJIS-Aligned Overlay, adding 15 new controls and 59 parameters beyond the moderate baseline, setting a rigid new benchmark for cloud procurement in the justice sector.[76]
- **AI Governance Mandates:** Florida is aggressively shaping its AI policy at the state level to counteract federal directives. Proposed legislation (such as the AI Bill of Rights) seeks to limit public sector use of foreign-developed AI tools, enforce strict data privacy, and heavily regulate hyperscale data center energy and water consumption.[13] Vendors must prove that AI models do not ingest state proprietary data for external training, ensuring absolute data sovereignty.[79]

7. Actionable Dell Opportunities (The "So What")

Based on the macro-environmental pressures, legislative mandates, and specific funded projects identified in this research, the Dell Technologies Account Executive and District Manager should immediately execute the following targeted sales motions:

Funded Alignment: Florida PALM & FX Data Center Refresh

- **The Opportunity:** The catastrophic delays in the Florida PALM project (pushed to 2027) and the modular transition of the Medicaid FX system represent an immediate, high-dollar infrastructure play. DFS and AHCA are struggling with data conversion, exhaustive interface testing, and legacy system remediation prior to cloud deployment.[23]
- **The Play:** Position **Dell PowerStore** and **PowerEdge** servers as the ultimate transitional bridge. These agencies require high-performance, ultra-reliable on-premises or hybrid-cloud staging environments to execute "Mock Conversions" and parallel payroll testing without disrupting current operations. Pitch Dell’s infrastructure as the essential de-risking agent for the delayed Stage Gate 6 (Deployment Readiness), ensuring that data is cleansed, formatted, and secure before it ever hits the Oracle cloud

environment.[80] *(Note: Ensure timelines account for the impending mid-April special session which must finalize the FY27 budget).*

Whitespace & Advisory: The Local Government Cybersecurity Grant Program (FLGCGP)

- **The Opportunity:** The Florida Digital Service controls a $15 million recurring budget to directly procure cybersecurity solutions for local governments.[19] While the state is currently purchasing software endpoints (like Tanium and CrowdStrike), there is a massive whitespace in the underlying data protection architecture at the municipal level.[20] Many rural counties lack the IT personnel to manage complex alerts, making them highly susceptible to ransomware.
- **The Play:** The AE should partner directly with FLDS procurement officers to position **Dell PowerProtect Data Manager and Cyber Recovery Vaults** onto the approved capabilities list. Since the state is buying on behalf of the counties (requiring no local match), package Dell's air-gapped vault technology as the ultimate failsafe against ransomware for fiscally constrained municipalities. This strategy completely bypasses local budget objections and secures a massive, statewide footprint for Dell's data protection portfolio.

Competitive Displacement: Escaping the NWRDC Chargeback Trap

- **The Opportunity:** State agencies are deeply frustrated by the rigid, opaque 3% capped chargeback models enforced by the Northwest Regional Data Center, while simultaneously facing intense legislative pressure to modernize their "technical debt".[43] Furthermore, the advancing Senate Bill 480 will legally require the NWRDC to meet stringent new standards established by DIGIT and report projected state data center costs directly to the Governor's Office of Policy and Budget every year, putting legacy infrastructure under even greater scrutiny.
- **The Play:** Execute an aggressive **Dell APEX** displacement campaign targeting federated agency CIOs (e.g., FDOT, DCF). By positioning APEX Data Storage Services, Dell can offer these agencies predictable, consumption-based OpEx pricing that circumvents the capital request scrutiny of the House IT Budget Subcommittee. Highlight how APEX provides cloud-like agility on-premises, allowing agencies to repatriate expensive public cloud workloads, avoid NWRDC billing friction, and maintain strict compliance with CJIS and the new GovRAMP overlays without sacrificing performance.[76]

Whitespace & Advisory: AI Infrastructure for Law Enforcement & Higher Education

- **The Opportunity:** FSU's CIO Jonathan Fozard is actively pushing machine learning and AI partnerships to the forefront of the university system, while the Department of Law Enforcement (FDLE) requires massive modernization for biometric identification.[38]
- **The Play:** Given the state's stringent new AI governance rules that restrict public data from being used in commercial Large Language Models (LLMs) [79], Dell must lead with **AI-Ready Infrastructure (Dell Generative AI Solutions with NVIDIA/Intel)**. Advise

these technical influencers on building private, on-premises AI factories that deliver high-performance computing (HPC) for biometric sorting and student analytics. This ensures complete data sovereignty, protects intellectual property, and guarantees compliance with Florida's proprietary data protection laws, positioning Dell as the trusted advisor for safe, ethical AI deployment in the public sector.
